

Task : Related, Calculate and Measure Totals

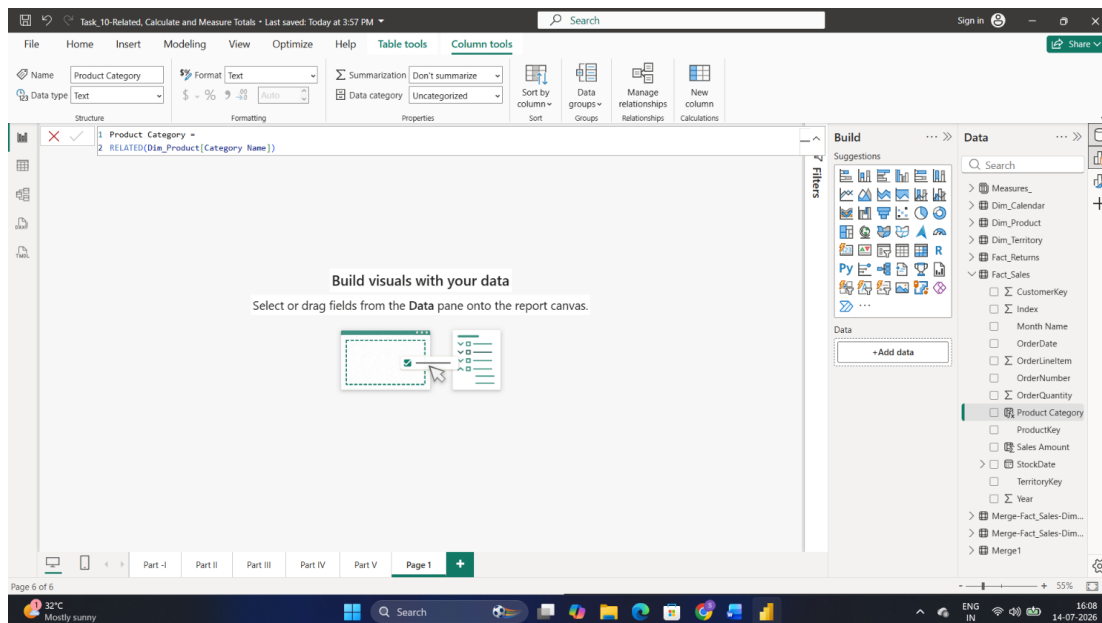

Part 1: Joining Data Using RELATED

Tasks

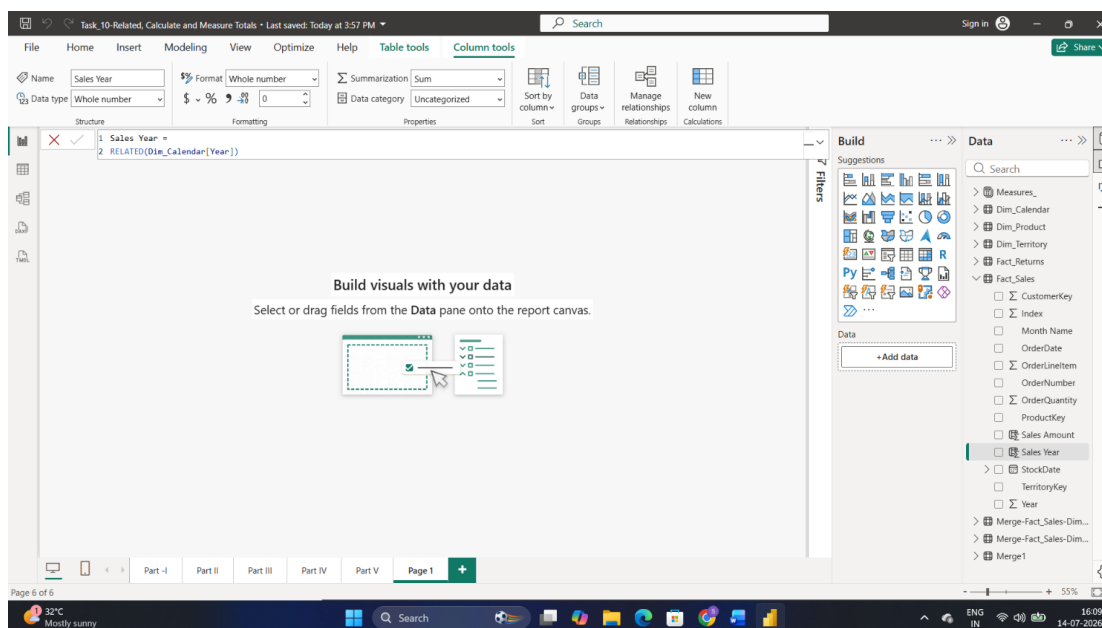

Create the following calculated columns:

In Fact_Sales

- Product Category (using RELATED)

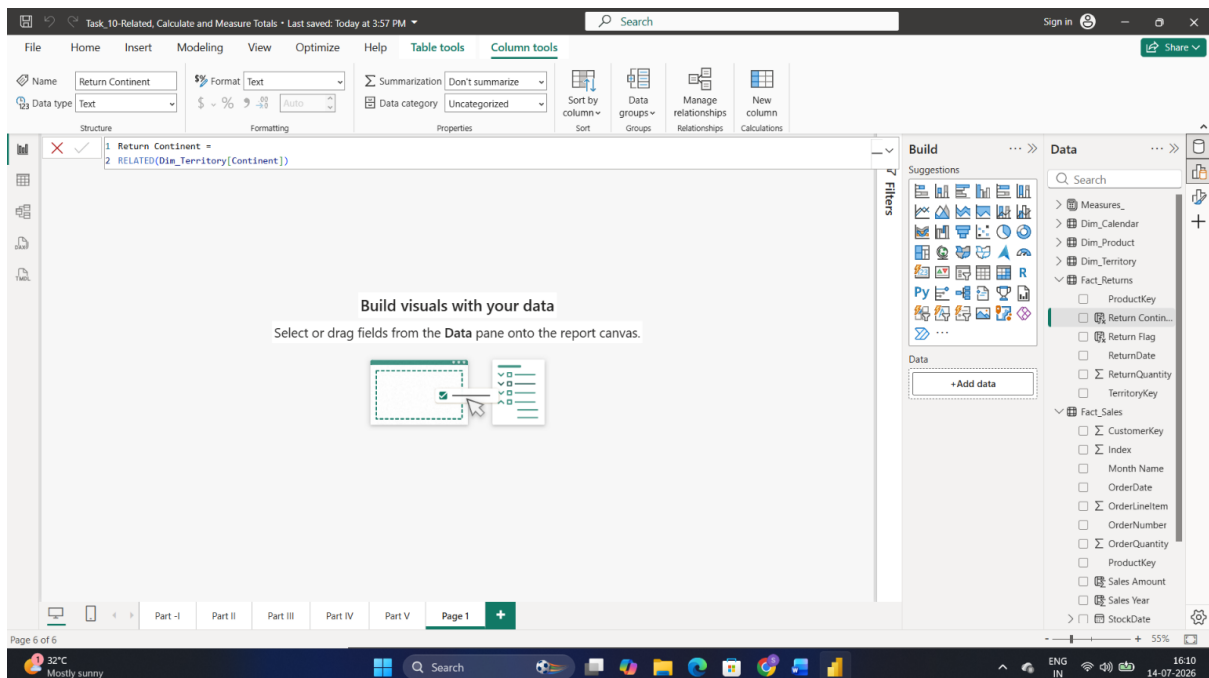

- Sales Year (using RELATED)

In Fact_Returns

Task : Related, Calculate and Measure Totals

- Return Continent (using RELATED)

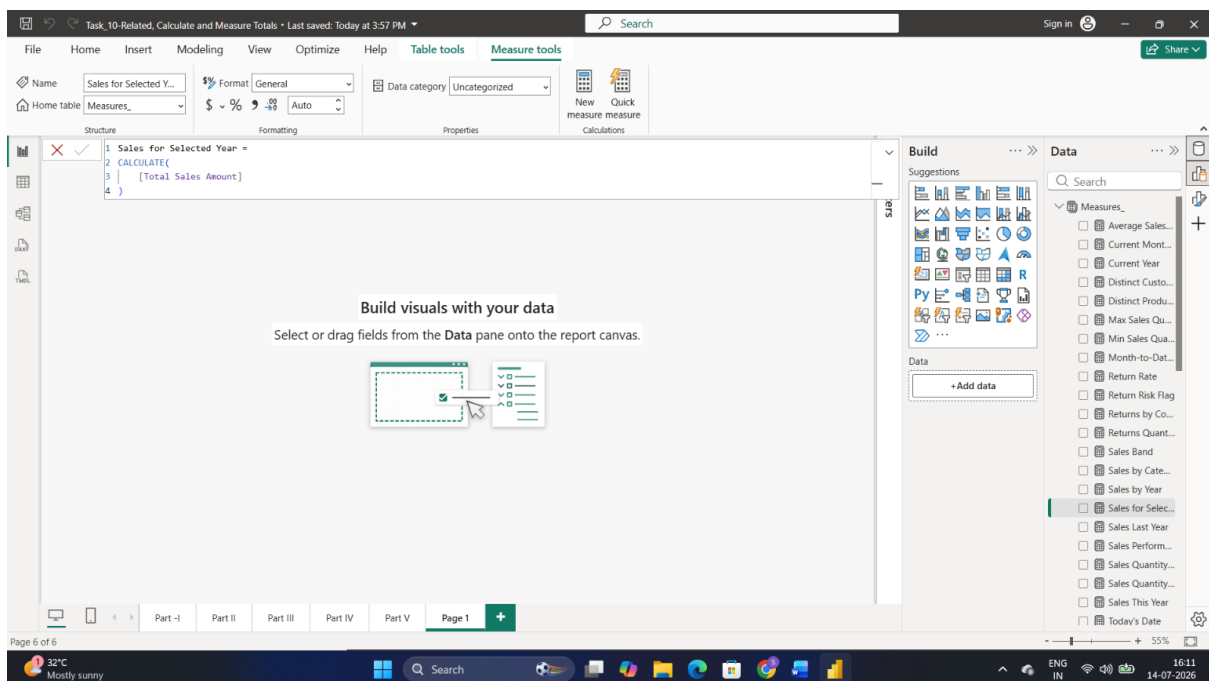

Part 2: CALCULATE Function (Context Transition)

Tasks

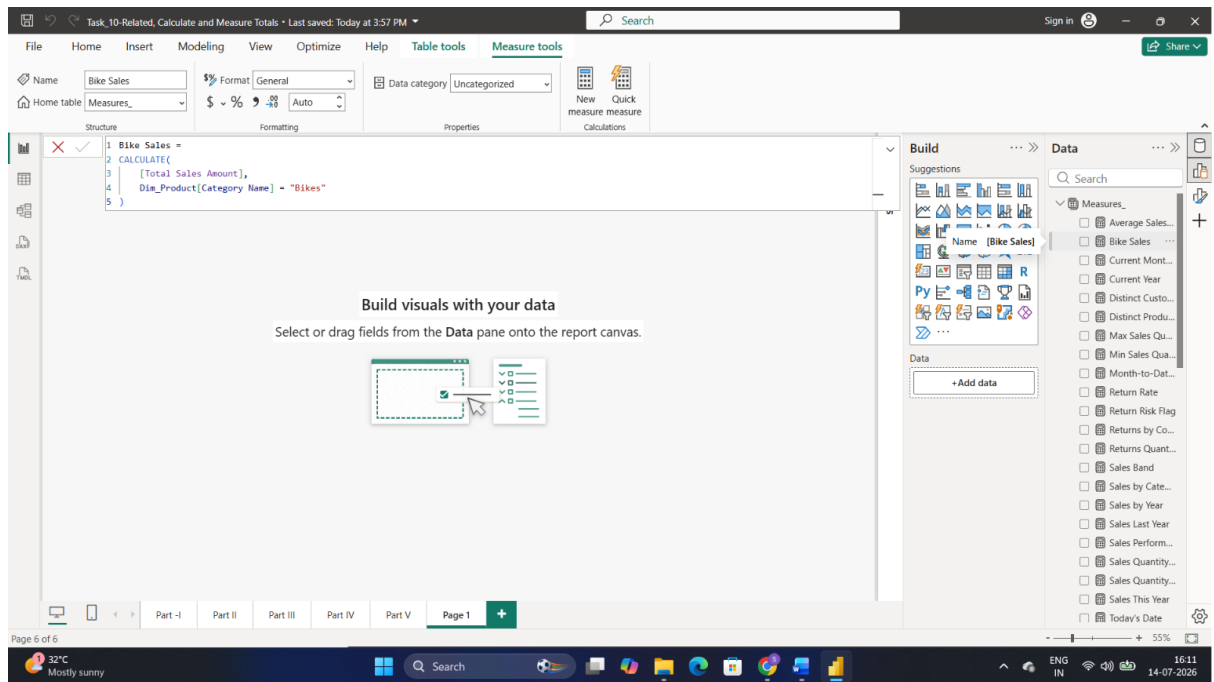

Create the following DAX measures:

- Sales for Selected Year

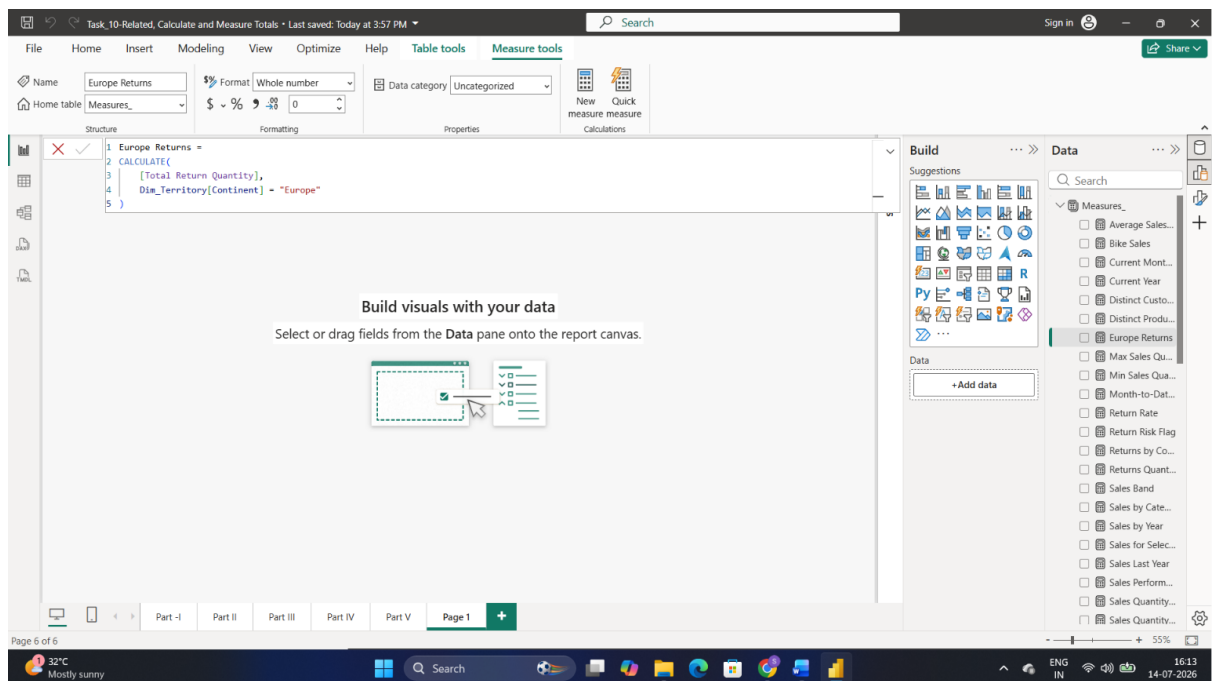

- Bike Sales (Sales for Category = Bikes)

Task : Related, Calculate and Measure Totals

- Europe Returns

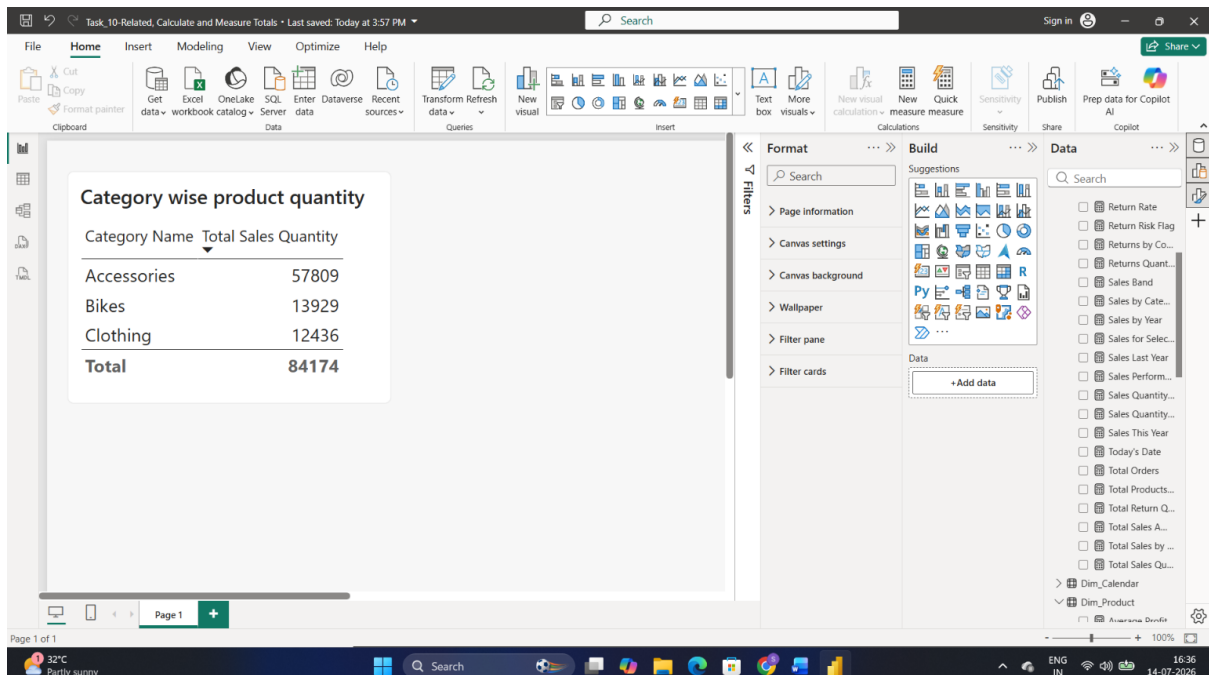

Part 3: Measure Totals Behavior

Tasks

1. Create a table visual with:
 - Product Category
 - Total Sales Quantity

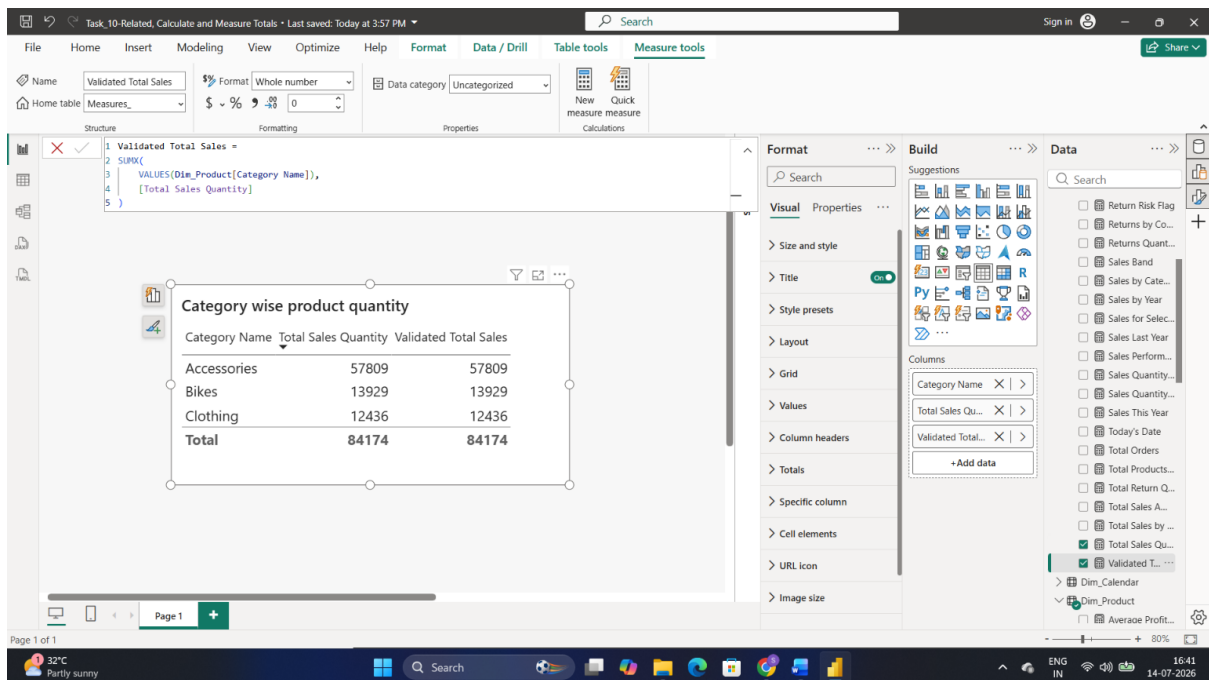

Task : Related, Calculate and Measure Totals

2. Observe row-level values and grand total.

The row-level values for Accessories, Bikes, and Clothing sum up to **84,174**, which matches the Grand Total shown in the table. This indicates that the Total Sales Quantity measure is aggregating correctly across all product categories.

3. Create a validation measure using iterator logic to validate totals.

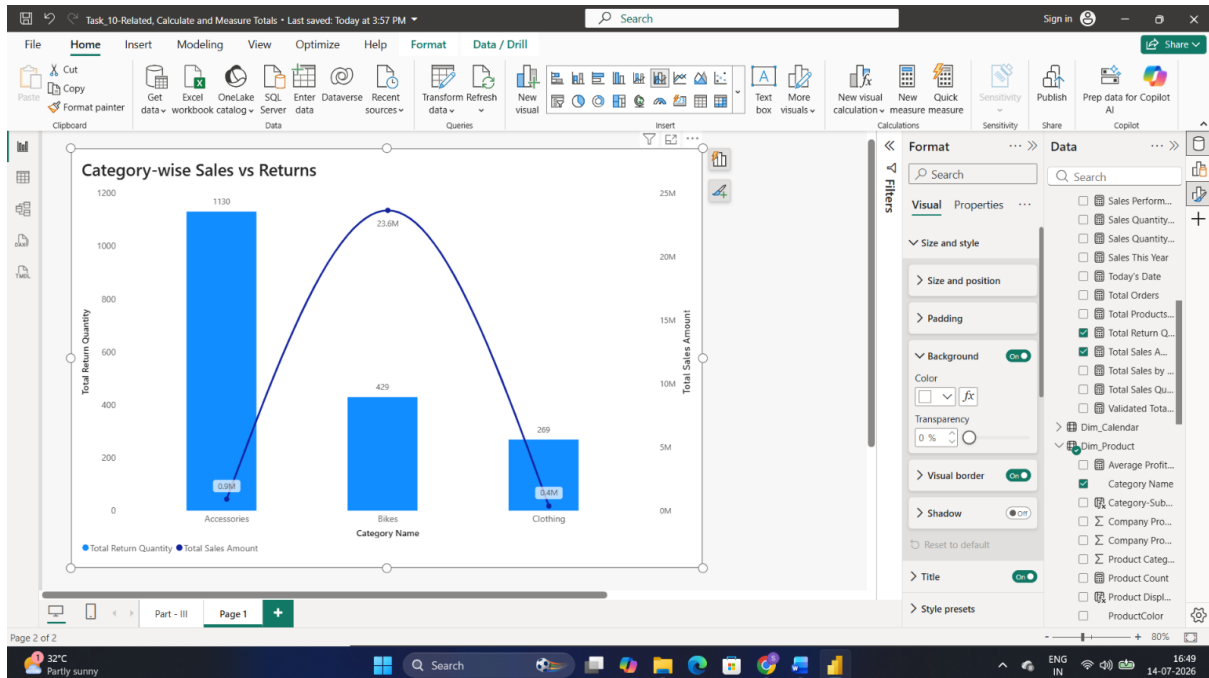

Part 4: Business Validation Using Visuals

Task : Related, Calculate and Measure Totals

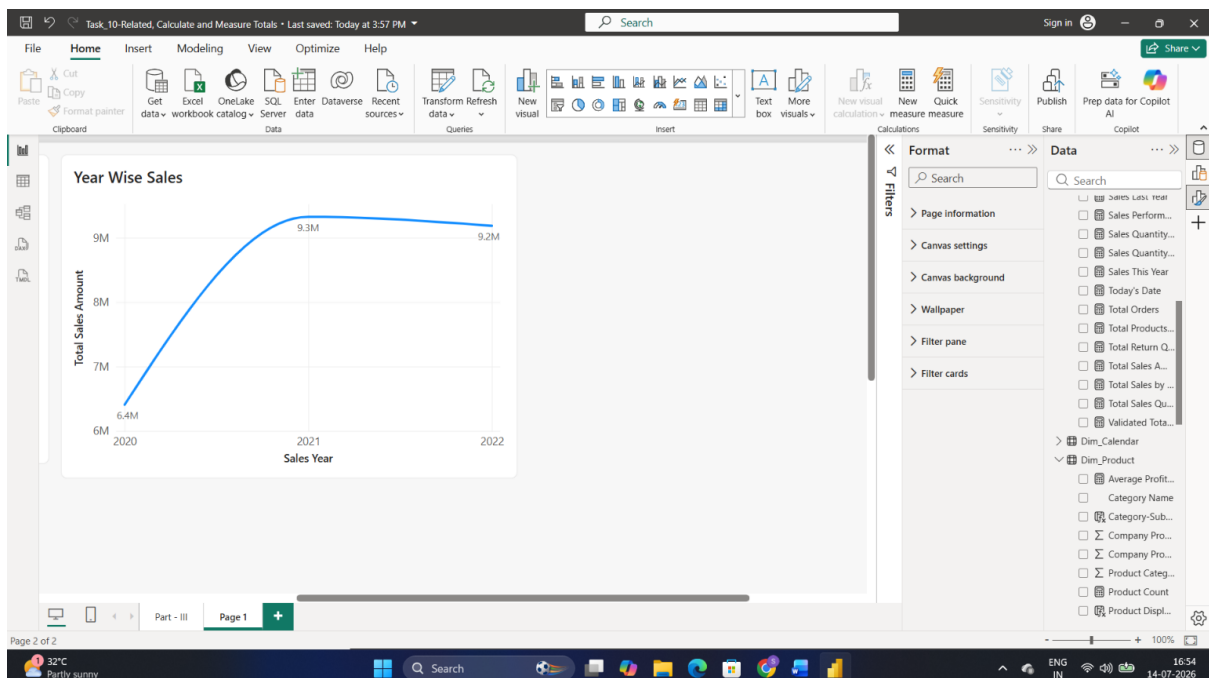

Tasks

Create visuals to answer:

- Category-wise Sales vs Returns

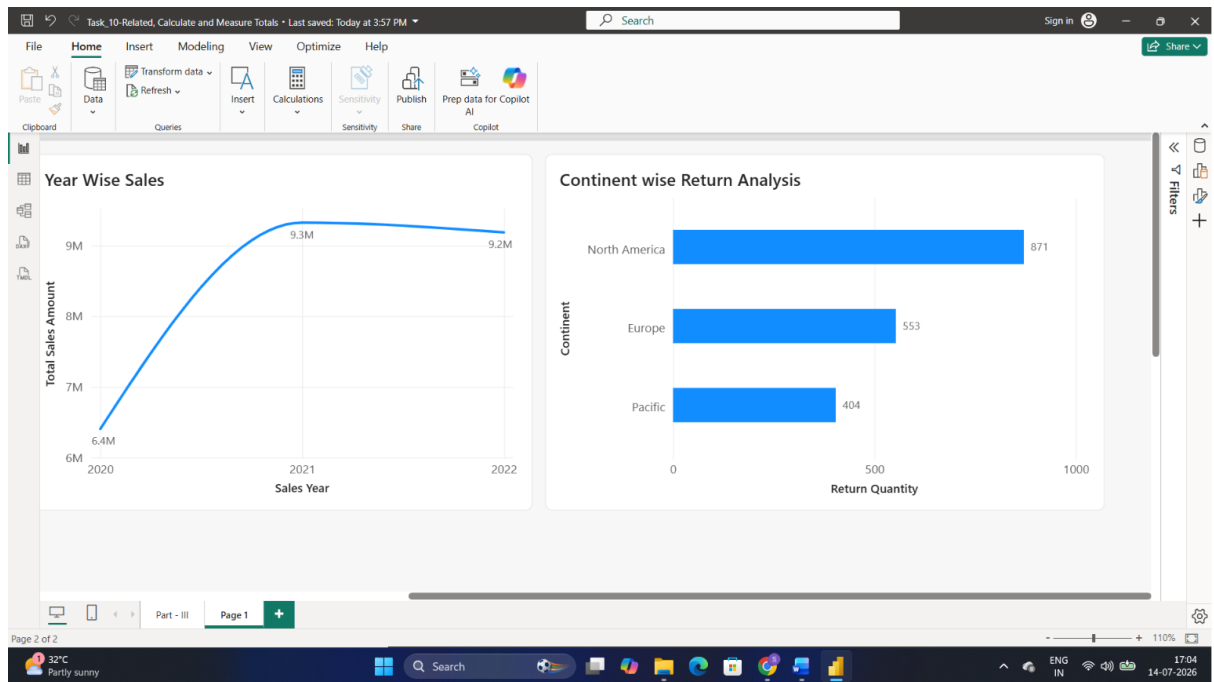

- Year-wise Sales using RELATED columns

- Continent-wise Return Analysis

Task : Related, Calculate and Measure Totals

Analytical Questions

Q1. Identify the category with highest sales using CALCULATE.

Using the CALCULATE function, Bikes is identified as the category with the highest sales. It generated the highest total sales amount of approximately 24 million, making it the best-performing product category.

Q2. Which continent shows the highest return volume?

North America shows the highest return volume, with a total return quantity of **871**. This indicates that North America has the largest number of product returns compared to Europe and the Pacific region.
