

TASK : Sales Trend & Forecast Analysis

Part 1: Line Chart with Trend & Forecast

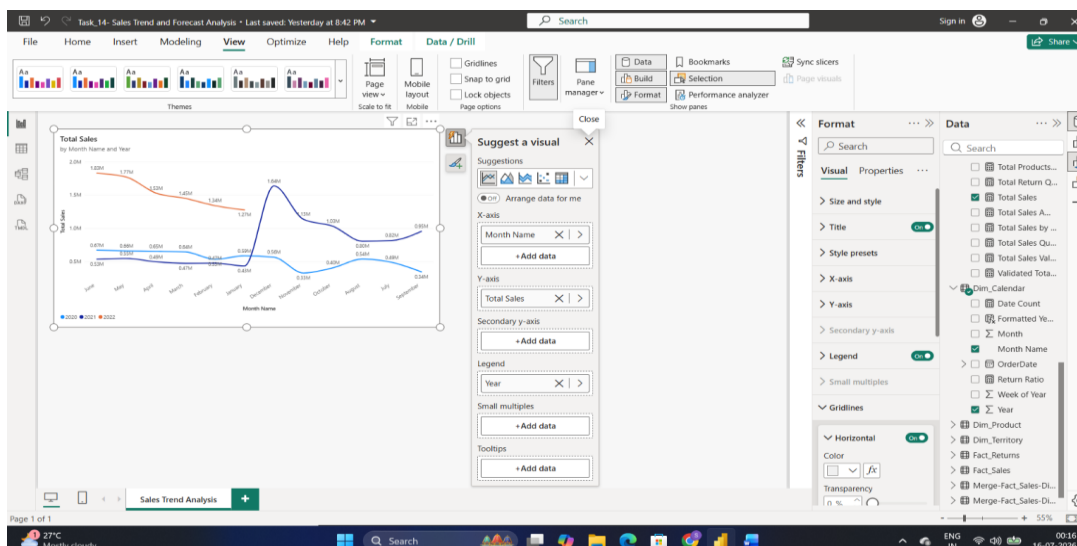

Tasks

1. Create a new report page named: **Sales Trend Analysis**.

2. Add a **Line Chart** with:

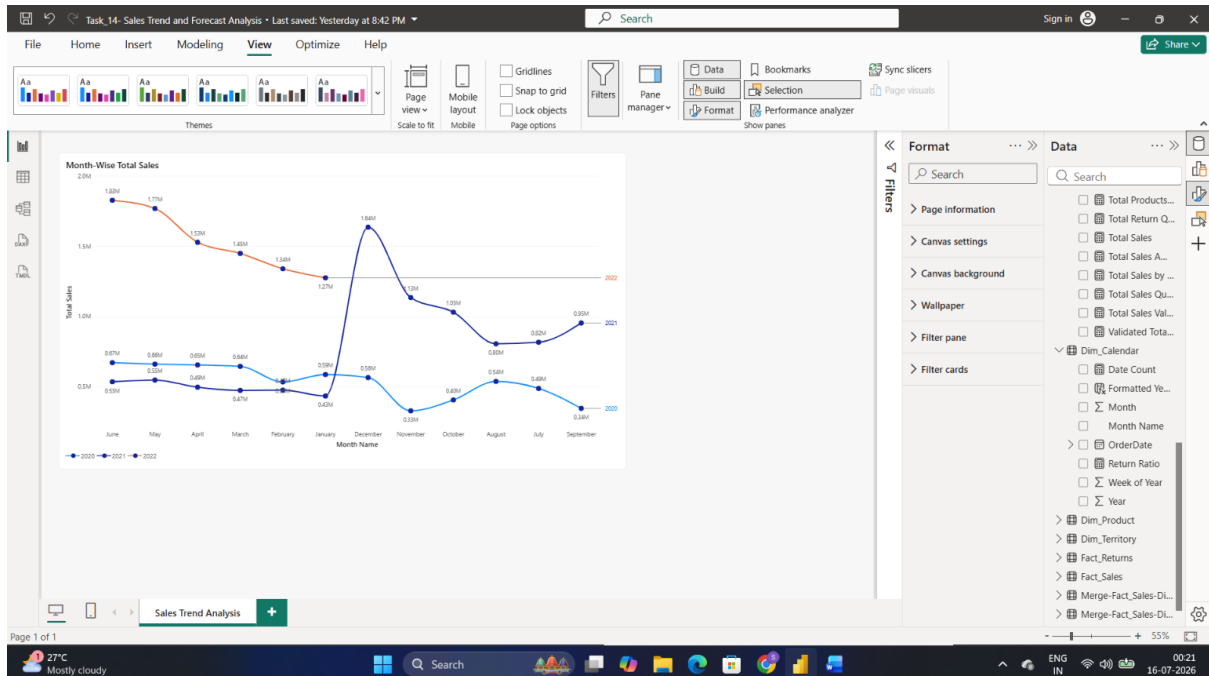

- X-Axis → Month Name (Dim_Calendar)
- Y-Axis → Total Sales
- Legend → Year

3. Format the line chart:

TASK : Sales Trend & Forecast Analysis

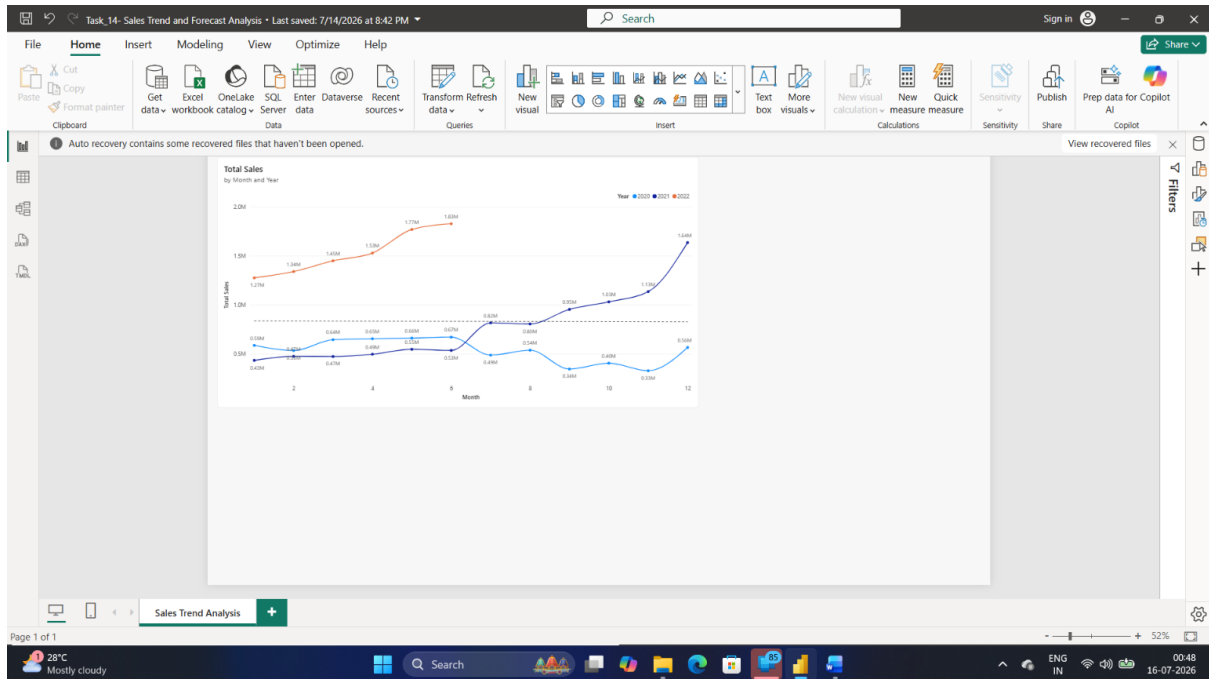

- Enable data markers
- Enable smooth line (if available)
- Add clear axis titles

4. Add a Trend Line:

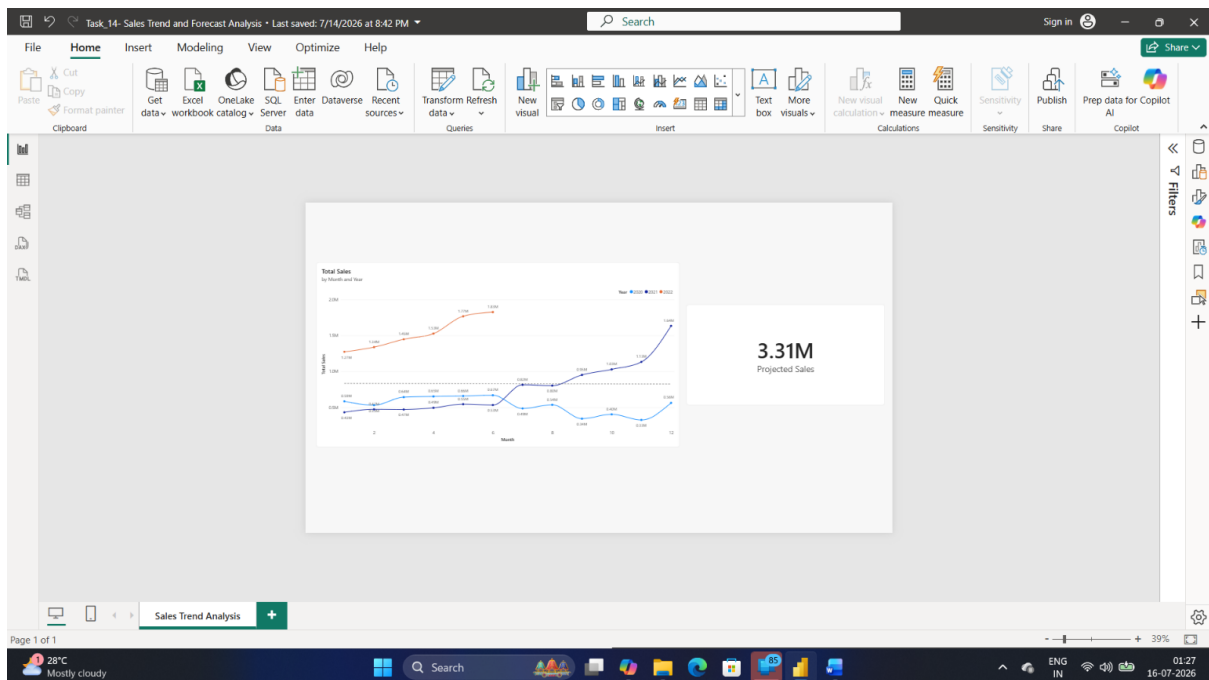

- Use Analytics pane
- Apply to Total Sales
- Format for clear visibility

TASK : Sales Trend & Forecast Analysis

5. Add Forecast:

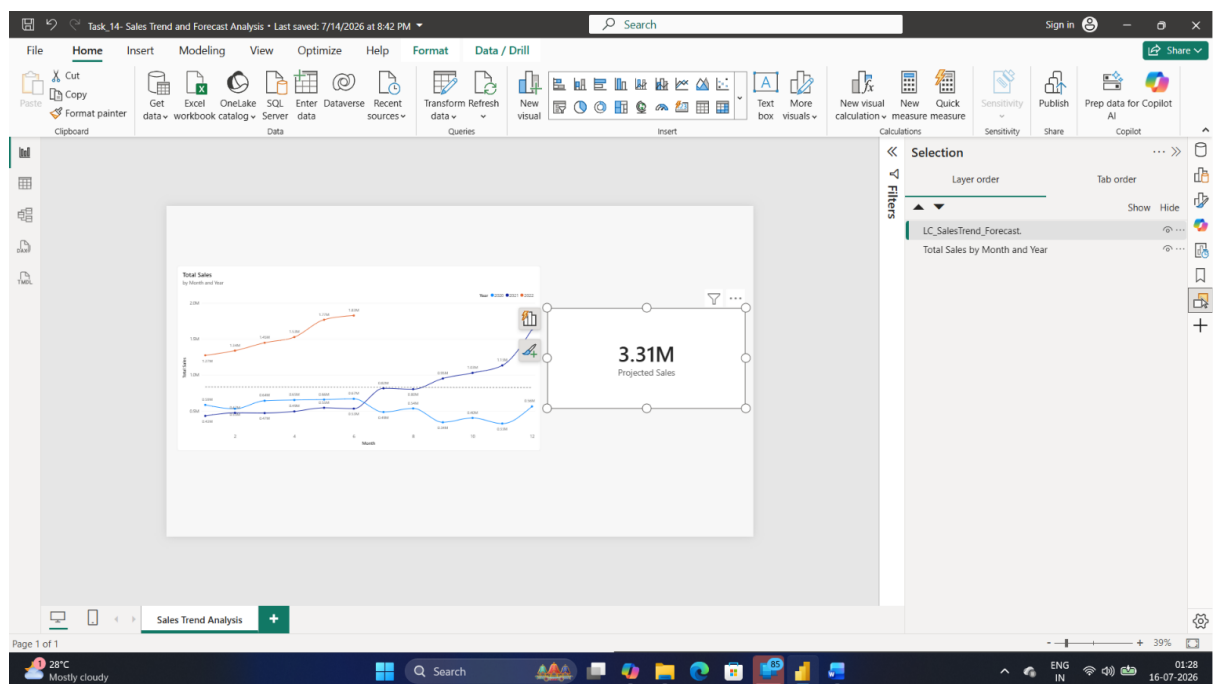

- Forecast length: 3–6 months
- Enable confidence interval
- Use default confidence level

TASK : Sales Trend & Forecast Analysis

Due to limitations in this version of Power BI Desktop, the built-in Forecast feature within the Analytics pane is not available. As a result, forecasting cannot be applied directly to visuals. To tackle the limitation of this Power BI version not supporting native forecasting, I calculated the projection using a custom DAX measure and displayed it in a card visual. The analysis shows that the projected sales amount is 3.31 million, providing a clear forward-looking insight despite the absence of built-in forecast functionality.

6. Rename the visual in Selection Pane: **LC_SalesTrend_Forecast**.

7. Align and center the visual properly on the page.
